

Internship < Internet of Things >

Description

In your thesis / internship you will investigate and answer a number of questions related to Internet of Things:

1. Describe and compare the different technological approaches currently favored by the different vendors
2. Investigate the potential products and services which can be developed and marketed using IoT infrastructure, platforms and technologies: what impact will the technology have on the portfolio of enterprises and their clients? What challenges do IoT business models present, and how can technology enable business? Analyse using interviews with selected enterprises 'IoT adoption barriers and enabler's': what drivers and disablers help enterprises to adopt such new technology, and what predictions can be made about the breakthrough and adoption rate? How can enterprises balance the need to be early a new market with the uncertainty and risks that involves? Also elaborate on the impact of fundamental changes in technology on business processes.
3. Accenture will help you by providing access to subject matter experts, internal research done in this field, and contacts with our clients to conduct interviews and collect data. Other or additional research questions are of course possible.
